

Midterm review Guideline

OOAD Midterm Review

- Presentation Slide - 1
 - Project name, team members
 - Problem Statement
 - Use Case Diagram
 - Mark use cases with “M” and “F” for midterm and final review, respectively (explained later)
 - **Demonstration**
 - Demo significant User Cases, involving one successful and several alternatives scenarios.
 - **Demonstration Snapshots**
 - One snapshot for each use case
 - **Significant Use Cases (1 to 2)**
 - Explain the text of your use cases
 - **Domain Model**
 - Use-case realizations with **GRASP** Patterns
 - System Sequence Diagram for the use case
 - A sequence diagram for a system event

OOAD Midterm Review

- Presentation Slide - 2
 - Design Class Diagram
 - Explain the difference between DCD and Domain model
 - Implementation Class Diagram
 - Show the source code of a significant functionality
 - Run the all Unit Tests (all should pass)
 - Show the source code of a significant test case
 - Project Information (next page)
 - Team Member efforts (later)

3

OOAD Midterm Review

- Project Information (for a brand new project)

Project information	UI (VC)	Domain (M)	Total
LOC of production code	X	X	X
The number of classes of production code	X	X	X
The number of methods of production code	X	X	X
The number of unit tests (testXXX)	X	X	X
LOC of test code	X	X	X

4

OOAD Midterm Review

- Project Information (for a maintenance project)

Project information	Original		Modified		New		Total	
	UI (VC)	Domain (M)	UI (VC)	Domain (M)	UI (VC)	Domain (M)	UI (VC)	Domain (M)
LOC of production code	X	X	X	X	X	X	X	X
The number of classes of production code	X	X	X	X	X	X	X	X
The number of methods of production code	X	X	X	X	X	X	X	X
The number of unit tests (testXXX)	X	X	X	X	X	X	X	X
LOC of test code	X	X	X	X	X	X	X	X

5

OOAD Midterm Review

- Team Member efforts

	Doing homework	Doing project
Team member John time efforts (hours)	X	X
Team member Mary time efforts (hours)	X	X
Total time efforts (hours)	X	X

6

OOAD Midterm Review

- Reminder

- Make sure you have the **proper environment** (e.g., wireless/wired network access) for your demonstration.
- Please **avoid** doing demonstration with **video clips**
- Your slides should have **page numbers**.
- Please provide **hardcopies** of your slides for the instructor and teaching assistant (2 copies).
 - Print 2 ppt pages in 1 A4 paper page; double sided; no back ground; black and white; avoid dark/black background.
- Your **presentation time is valuable**; don't waste it
- Prepare and use a **laser pointer**

7

Grading

- Grading is based on the following:

- **Presentation** 20%
- **Demonstration** 20%
- **Project** 20%
 - Scale (linear to your team size)
 - Code
- **Design** 20%
 - Any GRASP/GoF patterns
- **Testing** 20%

8

Midterm Review Common Problems

Common Problems

- **Overall**
 - Please **rehearse** your presentation beforehand to ensure proper **time management** and that the number of **slides isn't excessive**.
 - Start a **timer** (e.g., Windows **clock**) when you start presentation
- **Problem Statement**
 - Make it short, concise, and to the point.
 - 200-400 words
 - Like an abstract
 - Too much presentation time
 - If necessary, create another subsection to give details.
- **Demonstration**
 - Present your demonstration **before** presenting the rest of the documents
 - Design a **user scenario** that represents a typical application of your project

Slides of Presentation

- Use case diagram
 - Mark “M” for the use case that are already done and “F” for use cases that you plan to do in final review
 - Inconsistent with System Context Diagram
 - Missing important (e.g., computer system) actors
 - Having non-actors that do not use the use cases

M: Midterm review
F: To be done in final review

11

Common Problems

- Use case
 - Not a significant use case
 - Use-case names should begin with verbs
 - Missing Extensions
 - The use case that you choose to implement should be written in fully dressed format
 - The Extensions section is usually more complicated than the Main Success Scenario

12

Common Problems

- **Domain Model**

- Use **English**
 - So that you can reuse the vocabulary during design modeling
- Missing important concepts (E.g., timer)
- Spend a little more time to explain domain model
- Make sure the text in the diagram is big enough (18 pt)

- **System Sequence Diagram**

- Inconsistent with the Use Case it represents
- Use **English**

Too small:
should be readable
in **hardcopy** too

13

Common Problems

- **Sequence Diagram**

- Incorrect use of controller
- Does not related to SSD
- Missing GRASP patterns
- Incorrect positioning of GRASP patterns
- **Explain at least one instance of pattern usage**

- **Design Class Diagram**

- Inconsistent with domain model
 - For our homework assignment, I expect them to be highly related
- New concepts not in the domain model
- Incorrect notation
- Make sure the text in the diagram is big enough (18 pt)

- **Unit Testing**

- Automated unit testing

14
