Object-Oriented Analysis and Design

Homework #6

From homework 6, you are moving into iteration II. In this iteration, you are required to run the same steps through homework 2 to homework 4. Since you already have a domain model, a design model, and an implementation model, you are required to modify them based on the **next use-cases that are to be implemented**. The use cases should be the **most significant use-cases that are unimplemented in iteration I (i.e., the use cases that you did not demo in the midterm review and you plan to demo in the final review)**. Please choose **2 - 4 use cases for a one-person team**, **4 - 8 use cases for two-person teams**, and **6 - 12 use cases for three-person teams**. The use cases should be written in **fully dressed format**. In addition, you are required to modify the requirement document and domain model. **Note: To be environmentally friendly, save paper, and reduce the TA's grading time, the design, implementation, programming, and unit testing sections that you submitted for HW#5 are NOT included in this homework assignment.** Please remove these sections for now and submit them later in HW#7.

1 Cover Page

The cover page includes the *project title*, *homework number*, and *team members*.

2 [30%] Requirement Document (please highlight the new and modified document)

These contents should be modified according to the second use case, especially the use case itself.

2.1 Change History

2.2 Problem Statement

2.3 Summary of System Features [Larman04, Ch7.7]

2.4 Use Case Diagram [Larman04, Ch6.17]

2.5 Use Cases [Larman04, Ch6]

2.6 Non-functional Requirements and Constraints [Larman04, Ch7.4]

2.7 Glossary [Larman04, Ch7.9]

2.8 Software Environments

3 [40%] Domain model (please highlight the new and modified model)

3.1 New Domain classes showing only concepts [Larman04, Ch 9.4 ~ 9.6]

3.2 Add associations [Larman04, Ch 9.14]

3.3 Add attributes [Larman04, Ch 9.16]

3.4 Combine with the original domain model derived in iteration I.

***NOTE:** In addition to presenting the domain model, you need to give the reasoning of your model so that the TA understands why you consider a class, an attribute, or an association good or bad. For example, you should explicitly list the bad conceptual classes and state your reasons.*

- 4 [30%] Revise your requirement document and domain model based on TA's comments, midterm review, or your own findings, if any. In case that the grading of HW#5 is not completed yet, you should contact TA and obtain comments before submitting this assignment.**

5 Measurement

How many hours did you spend on this homework? Please record the time precisely in “YY/MM/DD HH:mm ~ HH:mm” format. **Keep logging precisely for each team member.**
